

Machine Learning Engineer - Ranking & Recommendations

Meta

Menlo Park, CA

About the Role:

As a Machine Learning Engineer at Meta, you will build state-of-the-art recommendation systems and ranking algorithms that serve billions of users across our family of apps including Instagram, Facebook, and Threads.

Responsibilities:

- Design, build, and train large-scale recommendation systems and deep learning models.
- Build high-throughput inference services containerized with Docker and Kubernetes.
- Write clean, production-grade code in Python and query massive data stores with SQL.
- Optimize distributed model training on GPU clusters using PyTorch and TensorFlow.

Minimum Qualifications:

- Minimum 4+ years of professional experience in applied machine learning.
- Proven experience with deep learning and machine learning architectures.
- Strong programming skills in Python and SQL.
- Production experience with PyTorch or TensorFlow for deep neural networks.
- Experience containerizing and deploying services using Docker and Kubernetes.

Preferred Qualifications:

- Experience with large-scale distributed training and high-throughput inference systems.
- Knowledge of recommendation systems, ranking models, and graph embeddings.
